

Some expex Linguistic Examples

LianTze Lim

June 7, 2016

- (1) This is an example.
- (2) a. There is a pair of pants on the floor.
b. ?*There are a pair of pants on the floor.
c. *There is the pair of pants on the floor.
- (3) a. **syá** *lu-keníkéni*
DI 11firely/11star
'small/tiny firefly/star'
- b. ***syá** *luto/lwito*
DI 11ashes

Each example can have a tag in angular brackets <>.

Example 1 is the simplest example you can create with `expex`. Then example 2 shows how you can add judgement marks.

Example parts can also be tagged and referenced; but remember that the 'main' example needs to have a tag, too. You may want to use `\getfullref` instead of `\getref`. See the difference: 3a vs a.
