## Your APA6-Style Manuscript

### Introduction

Your introduction goes here! Some examples of commonly used commands and features are listed below, to help you get started.

If you have a question, please use the support box in the bottom right of the screen to get in touch.

### Some $\LaTeX$ Examples

#### Sections

Use section and subsection commands to organize your document.  $\LaTeX$  handles all the formatting and numbering automatically. Use `ref` and `label` commands for cross-references.

#### Comments

You can add inline TODO comments with the `todonotes` package, like this:

This is an inline comment.

#### References

LaTeX automatically generates a bibliography in the APA style from your `.bib` file. The `citep` command generates a formatted citation in parentheses (Lamport, 1986). The `cite` command generates one without parentheses. LaTeX was first discovered by Lamport (1986).

#### Tables and Figures

Use the `table` and `tabular` commands for basic tables — see Table 1, for example. You can upload a figure (JPEG, PNG or PDF) using the files menu. To include it in your document, use the `includegraphics` command as in the code for Figure 1 below.

## Mathematics

L<sup>A</sup>T<sub>E</sub>X is great at typesetting mathematics. Let  $X_1, X_2, \dots, X_n$  be a sequence of independent and identically distributed random variables with  $E[X_i] = \mu$  and  $\text{Var}[X_i] = \sigma^2 < \infty$ , and let

$$S_n = \frac{X_1 + X_2 + \dots + X_n}{n} = \frac{1}{n} \sum_i^n X_i$$

denote their mean. Then as  $n$  approaches infinity, the random variables  $\sqrt{n}(S_n - \mu)$  converge in distribution to a normal  $\mathcal{N}(0, \sigma^2)$ .

## Lists

You can make lists with automatic numbering ...

1. Like this,
2. and like this.

...or bullet points ...

- Like this,
- and like this.

We hope you find writeL<sup>A</sup>T<sub>E</sub>X useful, and please let us know if you have any feedback using the help menu above.
